

# C4 AUTOMATED PRO BOT INSTRUCTIONS

This Deriv Binary Options bot was offered to you by Developer Lewis ([https://t.me/lewis\\_fx\\_king](https://t.me/lewis_fx_king)). For trading success, bots and assistance, join our Telegram channel [https://t.me/deriv\\_and\\_binary\\_bots](https://t.me/deriv_and_binary_bots)

## REQUIREMENTS

- This bot only works on Deriv.com. Upload to the DBot section ([app.deriv.com/bot](https://app.deriv.com/bot)).
- You must have minimum account balance of 100 to use the default stake of 0.35.

**C4 AUTOMATED PRO BOT** is a **Digit Over/Under** trading strategy bot for Deriv Binary Options traders. To use this bot, open the Deriv DBot interface at [www.deriv.com](https://www.deriv.com) website. Upload the bot (.xml file) and you are ready to RUN the bot.

## HOW TO USE

Before you RUN the bot, use the LDP analyzer at [www.binaryanalyser.com](https://www.binaryanalyser.com) to analyze the Deriv last digit sequence.

With the default **Prediction** (8), RUN the bot when you see that most digits lesser than 1 appear in the analyzer. You can only change the Prediction value to 8 or 1. If you input 1 then RUN the bot when you see that most digits lower than 8 appear in the analyzer.

Run once at start:

- set initial stake to 0.35
- set jump stake to initial stake \* 14.6
- set 2nd stake to initial stake \* 5
- set 3rd stake to initial stake \* 14
- set max stake to initial stake \* 66
- set duration to 1
- set target profit to 5
- set prediction to 8

Trade options:

Duration: Ticks duration Stake: USD initial stake (min: 0.35 - max: 50000) Prediction: prediction

## INITIAL STAKE & TARGET PROFIT

**Initial Stake:** The default initial stake for this bot is 0.35. This is the correct setting for \$75 capital in order to accommodate losses that may occur. You can change this setting in the *Trade Parameter > Run once at start* section. If you must increase your stake, make sure you have corresponding account balance.

**Target Profit:** By default the bot will automatically stop when after earning profit of 5 so that you can analyze the digit sequence and RUN the bot again. You can change this setting by changing to any number you want in the **target profit** box.

## EXTRA CAUTION

Even if the bot has not stopped running but you're seeing too many losses in the session, stop the bot after a win, change the volatility index and re-analyze the digits before running bot again.

HAPPY AND PROFITABLE TRADING!
